

PROFESSIONAL SUMMARY

Experienced Software QA Engineer skilled in manual and automated testing for web, mobile, and API platforms. Proficient in Selenium, Appium, Postman, Playwright and AI tools such as ChatGPT and GitHub Copilot achieving up to 30% reduction in regression cycles. Strong in Agile/Scrum, CI/CD integration, and cross-functional collaboration for high-quality releases. I currently hold AWS Cloud Practitioner Certification.

SKILLS

- Test Automation (Selenium, Appium, Playwright)
- Programming Language (Python, Java, JavaScript)
- CI/CD & Version Control (Jenkins, Git, GitHub)
- Database (MySQL)
- API Testing (Postman)
- Collaboration
- Good Communication skill
- Performance testing (JMeter/Lighthouse)
- AI tools (GetScandium, ChatGPT, GitHub Copilot, TestCraft)
- Operating Systems (Windows, Linux)
- Test Management Tools (Jira, Azure Devops, Excel, Xray)
- STLC and SDLC
- Agile Methodologies
- Cross-functional teamwork
- Test planning, test case design, defect tracking
- Documentation and reporting using MS Office
- AWS (EC2, S3, CloudWatch, Amazon RDS, AWS Lambda)

EXPERIENCE

Stanbic Bank: QA Engineer/Software Tester (Onsite)
March 2026 till date

- Participated in sprint planning, backlog refinement, and requirement review sessions, ensuring business requirements were testable and clearly defined.
- Developed and maintained comprehensive test plans, test scenarios, and test cases for banking applications, improving defect detection by 30% using Azure DevOps and Microsoft Excel.
- Performed end-to-end and regression testing using JavaScript (Playwright), reducing manual testing effort by 40%.
- Helped reduce the bug defect ratio from 75% to 20%, improving platform reliability and user experience.
- Reported, tracked, and verified defects using Azure Devops while collaborating closely with developers and stakeholders to ensure timely resolution.
- Supported User Acceptance Testing (UAT) activities by validating business requirements and ensuring applications met functional and regulatory expectations before production deployment.

Dodo Technologies Limited: QA Engineer (Remote)

May 2025 till date

- Strong understanding of Android ecosystems, UI/UX behaviors, and mobile workflows demonstrated through functional and regression testing on Dodo Workplace and Messenger SDKs across Android and iOS.
- Planned and implemented test strategies aligned with sprint goals for multiple products, including Dodo Workplace, Messenger, User Dashboard and Admin Dashboard.
- Designed and documented comprehensive test cases for all Dodo products leveraging ChatGPT, improving coverage and reducing documentation time by 40%.
- Utilized Jira and Xray for test management, defect tracking, and reporting, improving transparency and collaboration within agile sprints.
- Developed and maintained comprehensive test plans, increasing test coverage by 40% and ensuring stable, high-quality product releases.
- Collaborated closely with developers and designers to identify defects early, maintain code quality, and align QA efforts with release timelines.
- Performed regression and smoke test on various projects using JavaScript (Playwright) to reduce manual testing, leveraging on GitHub Copilot.

GRA: QA Engineer (Onsite)

September 2024 to September 2025

- Took part in reviewing requirements, wrote test plans, and documented test results for Taxpayers portal improving defect detection by 30%
- Documented comprehensive test cases to cover all features across all projects on Xray.
- Performed end-to-end and regression test on various projects using Python (Selenium) to reduce manual testing time by 40%, leveraging GitHub Copilot.
- Reported and tracked defects in Jira, collaborated with developers and participated in daily stand-ups on projects, improving transparency within agile sprints.
- Helped reduced the bug defect ratio from 85% to 24% in 12 months, improving platform reliability.
- Conducted performance testing with Lighthouse and Apache JMeter, ensuring scalability
- Collaborated with developers and designers to prevent defects, ensure high-quality code and define QA parameters through regular communication and test design.

360 Botech Development: QA Engineer (Remote)

February 2021 to October 2023

- Single-handedly reviewed requirements, wrote test plan and documented test results for 360 Lodge Suite (Hotel Management System), improving defect detection by 40%.
- Conducted comprehensive exploratory and end-to-end testing to cover all features on the website, ensuring reliable platform performance.
- Contributing to analysis of functional requirements and participating in engineering initiatives

- Creating technical documents to support test scenarios.
- Tested deployments in staging/production, ran smoke tests, and verified system stability after updates for all projects.
- Performed smoke and regression test on web application using Python (Selenium) to reduce manual testing.

EDUCATION

- **AWS Certified Cloud Practitioner** - November 2025, by AWS /Amalitech
- **Transition to Tech (SQA)** - September 2025, by Axo-lotl
- **BSc. in Computer Science** - 2022 to 2024.
University of Energy and Natural Resources (Sunyani- Ghana)
- **Python and Java Selenium, Postman and Playwright (JavaScript), Java Appium** - 2024, by Rahul Shetty Academy
- **Diploma in Computer Science** - 2020 to 2022
University of Energy and Natural Resources (Sunyani-Ghana)
